

Python Questions & Answers

Python Viva Questions & Answers (BCA Level)

1. What is Python?

Python is a high-level, interpreted programming language.

2. Who developed Python?

Python was developed by Guido van Rossum.

3. Why is Python popular?

Python is simple, easy to learn, and powerful.

4. What are the features of Python?

- Easy syntax
 - Interpreted language
 - Object-oriented
 - Portable
 - Open source
-

5. What is an interpreter?

An interpreter executes code line by line.

6. What is a variable in Python?

A variable stores data values.

Example:

```
x = 10
```

7. What are the basic data types in Python?

- int
 - float
 - str
 - bool
-

8. What is a list in Python?

A list is an ordered and mutable collection.

Example:

```
mylist = [1, 2, 3]
```

9. What is a tuple?

A tuple is an ordered but immutable collection.

10. What is a dictionary?

A dictionary stores data in key-value pairs.

Example:

```
student = {"name": "Rahul", "age": 20}
```

11. What is indentation in Python?

Indentation means spaces at the beginning of a line to define blocks of code.

12. What is a function?

A function is a block of reusable code.

13. How do you define a function in Python?

Using the def keyword.

Example:

```
def hello():
```

```
print("Hello")
```

14. What is a loop?

A loop repeats a block of code multiple times.

15. What are the types of loops in Python?

- for loop
 - while loop
-

16. What is the difference between break and continue?

- break stops the loop
 - continue skips the current iteration
-

17. What is a module in Python?

A module is a file containing Python code and functions.

18. What is the use of import keyword?

import is used to include modules.

Example:

```
import math
```

19. What is exception handling?

Exception handling manages runtime errors.

20. What is try-except in Python?

try-except is used to handle exceptions.

21. What is OOP in Python?

OOP means Object-Oriented Programming.

22. What is a class in Python?

A class is a blueprint for objects.

23. What is an object?

An object is an instance of a class.

24. What is inheritance in Python?

Inheritance allows one class to acquire properties of another class.

25. What is Python used for?

Python is used for:

- Web development
 - Data science
 - AI/ML
 - Automation
 - Software development
-

26. What is a comment in Python?

Comments are notes ignored by the interpreter.

Example:

```
# This is a comment
```

27. What is the file extension of Python files?

.py

28. What is the difference between list and tuple?

- List is mutable
 - Tuple is immutable
-

29. What is slicing in Python?

Slicing is used to access parts of a sequence.

Example:

```
name = "Python"
```

```
print(name[0:3])
```

30. Is Python compiled or interpreted?

Python is mainly an interpreted language.

Important One-Line Viva Answers

- **Creator of Python:** Guido van Rossum
- **Python file extension:** .py
- **Keyword to define function:** def
- **Keyword to import module:** import
- **Boolean values in Python:** True and False
- **Python supports OOP:** Yes
- **Python is open source:** Yes
